(54) IMAGE-FORMING APPARATUS

(57)Abstract:

PROBLEM TO BE SOLVED: To provide an image-forming apparatus which can obtain prints with the same resolution repeatedly in a short time.

SOLUTION: The apparatus has an identification code-applying part 7 which applies an identification code corresponding to an individual printing image, a memory part 4 which stores printing images and identification codes corresponding to the printing images, a printing process part 5 which prints the printing images and corresponding identification codes, and an identification code-reading part 8 which reads printed identification codes. Accordingly, printing can be repeated with the same resolution simply by reading out the identification code of a printed transfer material.

LEGAL STATUS

[Date of request for examination] 24.04.2001

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number] 3404255

[Date of registration] 28.02.2003
